

Atty. Docket No. JP919990158
(590.034)

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. **(Currently Amended)** A browser equipped telephone capable of displaying a web page by a browser comprising:

an inputter which inputs a URL of a web page;

a transmitter which transmits the URL inputted by said inputter in a form that can be distinguished from a voice message;

a receiver adapted to receive a URL and associated voice message transmitted from the outside through an incoming telephone call;

an answerer which records and reproduces the URL and associated voice message received by said receiver; and

a decoder which converts into a character format and sends to said browser said URL reproduced by said answerer; and

wherein said browser having received the converted URL information displays said web page associated with the URL while said voice message is played.

2. **(Original)** The browser equipped telephone according to claim 1, wherein

Atty. Docket No. JP919990158
(590.034)

said inputter automatically fetches a URL of a web page being displayed and sends said URL to said transmitter.

3. **(Original)** The browser equipped telephone according to claim 1, further comprising a URL encoder which converts into a tone signal format the URL of a character format inputted by said inputter, wherein said decoder converts into a character format the URL of a tone signal format received by said receiver.

4. **(Original)** The browser equipped telephone according to claim 1, further comprising a URL function identifier which determines whether the telephone of the other party has a URL function.

5. **(Original)** The browser equipped telephone according to claim 4, wherein said URL function identifier transmits a URL function identification request at the time a call is placed, and transmits a URL function identification reply in response to a URL function identification request from the other party at the time a call is received.

6. **(Original)** The browser equipped telephone according to claim 4, wherein said URL function identifier transmits a URL function identification request to a calling party at the time a call is received, and returns a URL function identification reply to a called party in response to a URL function identification request from the called party.

7. **(Original)** The browser equipped telephone according claim 1, wherein said transmitter adds delimiters before and after said URL, respectively, and transmits the URL together with a voice message.

(590.034)

8. **(Currently Amended)** In a browser equipped telephone capable of displaying a web page by a browser, a method for recording a URL of a web page in an answering mode, comprising the steps of:

inputting a URL;

transmitting said URL in a form that can be distinguished from a voice message;

receiving a URL and associated voice message that are transmitted from the outside through an incoming telephone call;

recording and reproducing the received URL and associated voice message; and

converting the reproduced URL into a character format and providing it to said browser; and

wherein said browser having received the converted URL information displays said web page associated with the URL while the voice message is played.

9. **(Original)** The method according to claim 8, wherein said URL inputting step automatically fetches a URL of a web page being displayed.

10. **(Original)** The method according to claim 8, further comprising the step of converting into a tone signal format the inputted URL of a character format, and said converting step converts a format of said received URL from a tone signal format into a

Atty. Docket No. JP919990158
(590.034)

character format.

11. **(Original)** The method according to claim 8, further comprising the step of determining whether the other party's telephone has a URL function.

12. **(Original)** The method according to claim 11, wherein said determining step transmits a URL function identification request at the time a call is placed, and returns a URL function identification reply in response to a URL function identification request from the other party at the time a call is received.

13. **(Original)** The method according to claim 11, wherein said determining step transmits a URL function identification request to a calling party at the time a call is received, and returns a URL function identification reply to a called party in response to a URL function identification request from the called party.

14. **(Original)** The method according to claim 8, wherein said transmitting step adds delimiters before and after said URL, respectively, and transmits the URL together with the voice message.

15. **(Currently Amended)** A program storage device readable by machine for tangibly embodying a program of instructions executable by said machine to perform, in a browser equipped telephone capable of displaying a web page by a browser, a method for recording a URL of a web page in an answering mode, said method comprising the steps of:

inputting a URL;

Atty. Docket No. JP919990158
(590.034)

transmitting said URL in a form that can be distinguished from a voice message;

receiving a URL and associated voice message that are transmitted from the outside through an incoming telephone call;

recording and reproducing the received URL and associated voice message; and

converting the reproduced URL into a character format and providing it to said browser; and

wherein said browser having received the converted URL information displays said web page associated with the URL while the voice message is played.
